SEALED CLOUD TECHNOLOGIES

A member of 

by unicon - A member of 

**Data storage and transfer** are easy and secure – including attachments to e-mails.

**Interfaces and APIs** enable smooth integration into a company's own IT infrastructure.

**Teamwork** is significantly simplified with messaging, chat and collaboration features.

**More than 1,200 companies around the world have already put their trust in *idgard*<sup>®</sup>.** This web service secures digital communication and collaboration with partners and customers at the highest level, and simplifies them as well. With the help of *idgard*<sup>®</sup>, data rooms for projects can be set up in no time. They turn file sharing into an efficient and highly secure process. Users on the go have protected access to their data via app or browser. No one else has access to them. The internationally patented sealed cloud technology ensures this protection. It also automates key management. Instead of getting bogged down in technical questions, users can focus on their jobs. The following features make *idgard*<sup>®</sup> unique:

**The simple and secure storage and exchange of data online**

**Protected mobile access via browser and app**

**Audit-proof data rooms for company-wide projects**

**Certification in the highest protection class for cloud services (TCDP)**

**Efficient teamwork with messaging, chat and collaborations features**

**Compliant with the GDPR**

***idgard*<sup>®</sup> is easy to use.** Data rooms can be set up within a matter of minutes. Colleagues can be invited with a simple click. Guest licenses provide access to external partners. This access can be regulated using individually assigned authorizations. Guests can also share files. People sometimes send sensitive data by e-mail from force of habit, but

may violate company policy in the process. Thus, a particularly good integration of secure alternatives in Outlook is necessary. For *idgard*<sup>®</sup>, an Outlook add-in has been developed. It can serve as an optimal complement both locally on the client and centrally in Office 365 Outlook.

# YOUR BENEFITS

Intuitive usability and user friendliness thanks to a familiar online storage interface

Working as usual thanks to a particularly good integration into Office und Outlook

More efficiency thanks to easy set-up and scalability of data rooms for projects

Protection of competitive advantages and no leaking data thanks to highest security levels regarding data storage and transfer

Specially useful for users bound by professional secrecy (such as doctors, tax consultants, lawyers) thanks to compliance with German criminal code

Privacy by design and TCDP certification make *idgard*® compliant with the EU's GDPR
