

CeBIT 2018: Uniscon presents the Sealed Platform

The cloud-security experts at Uniscon, a TÜV-SÜD subsidiary firm, are presenting a high-security cloud-platform for services and applications of all types at CeBIT 2018.

Munich, 24th of May 2018: Creating Internet-of-Things and Industrial IoT applications without a secure cloud infrastructure is inconceivable. The cloud-specialists from **Uniscon GmbH** will present a suitable solution at **CeBIT 2018**: At the shared podium **CeBIT heise Security Loft (Hall 12/Booth A18)** the team from Munich will present their **Sealed Platform** from Tuesday, 12th June onwards.

The Sealed Platform is a cloud platform for security-sensitive applications. It guarantees the technologically completely enclosed – and thus legally compliant – processing of data. Privileged access in the computing center or on an application-level by an administrator is excluded. This means that today, the Sealed Platform is the only productively deployable platform that grants such a comprehensive level of safety.

The platform is suitable for all types of applications and operating systems, especially for those processing sensitive and confidential firm data. The data in document management systems, the subjects of big data analyses or the data of apps that process personally identifiable information are examples.

To all of you who wish to comprehensively inform yourselves, we can only recommend:

- The Sealed Platform as the enabler for secure SaaS-, IoT- and Industrial IoT offers: In his talk “Sealed Platform – Ultimate Security for your data and applications in a cloud centric world”, Uniscon-COO Dr. Ralf Rieken will explain the possibilities that the Sealed Platform opens up.
When: Thursday, 14th of June, 15:30 PM
Where: Cyber Security Expert Stage (Hall 12)

Alternatively, you can visit us from **Tuesday, 12th of June up until Friday, 15th of June 2018** at the shared podium **CeBIT heise Security Loft in Hall 12, Booth A18** to ask any personal questions you might have! We are looking forward to your visit!
