

## sealed platform at Techweek: A strong partner to accompany you through digital transformation

**October 14, 2019 – Munich:** The digital transformation is happening right now, and large companies are pioneers in the field: According to a [survey carried out by the company KfW](#), more than 90% of large companies have firmly planned to take measures regarding digitalization in the next two years. However, they are facing compliance challenges, like particularly strict requirements when it comes to data protection and data security.<sup>1</sup> At Techweek, TÜV SÜD subsidiary uniscon will show how the sealed cloud technology can help such companies reach the necessary level of security.

With the sealed platform—a highly secure cloud platform—uniscon supports companies that need to meet even the highest requirements for data protection and IT security, for example, in the area of eHealth or finance. At the Techweek in Frankfurt, the German cloud security experts share their stand (930) with TÜV SÜD and TÜV Hessen and there they explain how the sealed platform can provide companies with the necessary level of security.

“Thanks to its special infrastructure, the sealed platform represents the best basis for legally compliant services in the field of SaaS and IoT,” says Jörg Horn, Global Head of Business Development at uniscon, in his presentation **"Ultra-secure cloud as an enabler for digital transformation"**. Using various case studies from the industry, he demonstrates how uniscon’s technology reliably protects data and applications. Among other things, Horn mentions RegTech and eHealth services as well as collaboration and key management systems: “This technology provides effective protection, does not allow privileged access and is easy to install. This way, it helps companies meet the compliance requirements and develop new digital business models.”
